Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* Will be sequenced to completion. In the event that

* the record is updated, the accession number will

NOTE: This is a 'working draft' sequence. It currently consists of 20 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   433: contig of 433 bp in length gap of unknown length contig of 2680 bp in length gap of unknown length

                                                                                                                                                                                                                                                                                                                                                                                                              * NOTE: This record contains 88 individual

* sequencing reads that have not been assembled into
contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       p of 100 bp contig of 796 bp in length p of 100 bp in contig of 745 bp in length p of 100 bp contig of 780 bp in length

Clone requests: clonerequest@sanger.ac.uk

On Jul 4, 1998 this sequence version replaced gi:3281979.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. This sequence is the entire insert of clone 511824. This sequence has been finished according to sequence map criteria as follows. An attempt is made
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HS511B24 146547 bp DNA PRI 23-NOV-1999 HOME Sapiens DNA sequence from clone 511B24 on chromosome 20q11.2-12. Contains the TOP1 gene for Topoisomerase I, the PLCG1 gene for I-Phosphatidylinositol 4,5-Bisphosphate Phosphodiesterase Gamma 1 (EC 3.1.4.11) PLC-Gamma-1, Phospholipase C-Gamma-1 PLC-II, PLC-Gamma-1, Phospholipase C-Gamma-1 PLC-II, PLC-Gamma-1 PLC-II, PLC-Gamma-1 Sinc Finger Homeobox protein and a 608 Ribosomal Protein L23 LIKE pseudogene. Contains a predicted CPG island, ESTS, STSS and GSSS, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          HTG: 1-Phosphatidylinositol-4,5-Bisphosphate Phosphodiesterase Gamma 1; 60S Ribosomal Protein L23; Phospholipase C-Gamma-1; PLC-148; PLC-Gamma-1; PLC-11; PLCG1; TOP1; Topoisomerase I.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /note-"match: proteins Q07050 043256 P79994 P14512 Q04750 P11387 013463 Q00313 Q94705 P07799 P04786 CE12282 CE12284
to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key. This sequence was generated from part of bacterial clone contigs human chromosome 20, constructed by the Sanger Centre Chromosome Mapping Group. Further information can be found at http://www.sanger.ac.uk/RGP/Chr20
511B24 is from the library RCI3 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For further details see http://worpac.med.buffalo.edu/ VECTOR: pCYPAC2.

It currently * consists of 16 contigs. The true order of the pieces is * not known and their order in this sequence record is * arbitrary. Where the contigs adjacent to the vector can be identified, they are labelled with 'clone_end' in the * feature table. Some order and orientation information * can tentatively be deduced from paired sequencing reads * which have been identified to span the gap between two * contigs. These are labelled as part of the same * 'fragment_chain', and the order and relative orientation * of the pieces within a fragment_chain is reflected in * this file. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. * This record will be updated with the finished sequence as * soon as it is available and the accession number will be * preserved.

* 1450 contigs of 1450 bp in length; fragment_chain i * 51793 68343 contig of 1357 bp in length; fragment_chain i * 65470 68344 contig of 1357 bp in length; fragment_chain i * 65470 68345 contig of 1359 bp in length; fragment_chain i * 10732 contig of 1358 bp in length; fragment_chain i * 10733 117902 contig of 1358 bp in length; fragment_chain i * 10732 contig of 1358 bp in length; fragment_chain i * 10735 117002 contig of 1350 bp in length; fragment_chain i * 10732 117002 contig of 1300 bp in length

* 10736 12603 contig of 1327 bp in length

* 10737 12602 contig of 1328 bp in length

* 10732 17741 contig of 1300 bp in length

* 10502 17741 contig of 1300 bp in length

* 10502 17741 contig of 1300 bp in length

* 10503 contig of 1229 bp in length

* 10504 1525 contig of 1229 bp in length

* 10505 contig of 1229 bp in length

* 10507 contig of 1229 bp in length

* 10508 17741 contig of 1295 bp in length

* 10509 125003 contig of 1295 bp in length

* 105003 contig of 1295 bp in length

* 105003 contig of 1295 bp in length

* 105003 contig of 1295 bp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6
134E15 is from the library RPCII constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For further details see http://bacpac.med.buffalo.edu/ VECTOR: pCYPAC2.

Location/Qualifiers

/ Chromosome="Homo sapiens"
/ Chromosome="6"
                                                                                   Where differences are found these are annotated as variations variations together with a note of the overlapping clone name. Note that the variation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence is the entire insert of clone 134E15. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DFRRGSPEMPFYPRVYPPIRAPLPEDFLKASLAYGIERPTYITRSPIPSSTTPSPSA

NOTE: This is a 'working draft' sequence. It currently consists of 48 conigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* consists of 28 contigs. The true order of the pleces
* is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               6618 7417: gap of 6617 bp in length 6618 7417: gap of 800 bp 17468 15864: contig of 847 bp in length 15865 1664: gap of 800 bp 1853 18537: contig of 1873 bp in length 1858 1937: gap of 800 bp 26187 26186: contig of 1873 bp in length 26187 2696: gap of 800 bp 26187 2696: gap of 800 bp 28911 28910: gap of 800 bp 28911 28910: gap of 800 bp 28911 23475: contig of 1365 bp in length 32476 33275: gap of 800 bp 33276: gap of 800 bp 33276: gap of 800 bp 33276: gap of 800 bp 4088 49373: contig of 2886 bp in length 38323: gap of 800 bp 4088 49373: contig of 2886 bp in length 4088 49373: contig of 2886 bp in length 43974 4473: gap of 800 bp 4008 4473: gap of 8008 4473 6478 4473 6478 4473 6478 4473 6478 4473 6478 4473 6478 4473 6478 4473 6478 4473

requests: One beginning in the control of sequence version replaced gi:7009540.

IMPORTANT: This sequence is unfinished and does not necessarily represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may phage etc. Order of segments is not known; 800 n's separate segments. Contig_LD: 00025 Length: 6617bp

* NOTE: This is a "working draft' sequence. It currently
consists of 28 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
                                    Homo sapiens chromosome 6 clone RP1-62L18, *** SEQUENCING IN PROGRESS ***, 28 unordered pieces.
